

Encyclo PCR kit for superior amplification of full-length-enriched cDNA

Encyclo PCR kit is suitable for most PCR applications. It is especially recommended for cDNA amplification because of optimal combination of high fidelity and processivity provided by Encyclo polymerase mix.

Evrogen Encyclo polymerase mix produces high yields of PCR products from a wide variety of templates and displays following features:

- 5'>3' DNA polymerase activity with high processivity
- Proofreading 3'>5' exonuclease activity
- Automatic hot start
- TA cloning compatibility

Product	Cat.#	Size
Encyclo PCR kit	PK001	100 rxn

Storage: -20°C.

Kit is intended for research purposes only. Kit is not available in certain countries. Please contact your local distributor or Evrogen before ordering.

Kit includes components for 100 PCR reactions of 50 µl each.

Encyclo buffer has been developed to facilitate the amplification of specific PCR products and to provide successful amplification of long DNA templates. Encyclo PCR kit includes a mix of high-purity deoxyribonucleotides as well as sterile PCR water. Control DNA template and primer mix enclosed can be used for positive control PCR reaction.
